

Domestic Travel Requirement Change Effective April 1, 2021

Based on guidance recently posted to the [New York State Department of Health website](#), “Asymptomatic travelers entering New York from another U.S. state or territory are no longer required to test or quarantine as of April 1, 2021. Quarantine, consistent with the CDC recommendations for international travel, is still recommended for domestic travelers who are not fully vaccinated or have not recovered from laboratory confirmed COVID-19 during the previous 3 months. Symptomatic travelers must immediately self-isolate and contact the local health department or their healthcare providers to determine if they should seek COVID-19 testing.”

“International travelers arriving in New York must comply with all [current CDC requirements](#) for testing and quarantine after international travel. All travelers must complete the NYS traveler health form.

Upon arrival in the U.S., international travelers must either quarantine for 7 days with a test 3-5 days after travel, or quarantine for the full 10 days without a test. This requirement applies to all international travelers whether they were tested before boarding, are recovered from a previous COVID-19 infection, or are fully vaccinated. Guidance on how to quarantine [can be found here](#).

Upon arrival in the U.S., travelers must fill out the [NYS Department of Health traveler health form](#) to further prevent the spread of COVID-19.”

For more information please visit the [NYSDOH website](#).
